September 12, 2019

1. Since the Resource constraint (Social Planner Problem) is $c_t = A_t k_t^\alpha + (1-\delta)k_t - k_{t+1}$ we can write the budget constraint in recursive form as $c = Ak^\alpha + (1 - \delta)k - k'$

   - **State variable**: k, A

   - **Control variable**: k'

   Therefore, the Bellman equation:

   $$V(k, A) = \underset{k'}{\text{Max}} \left\{ \frac{(Ak^\alpha + (1 - \delta)k - k')^{1-\sigma}}{1 - \sigma} + \beta \sum_{A' \in A} \Pi(A'|A) V(k', A') \right\}$$

   subject to

   $$c \in [0, f(k)] \tag{1}$$
   $$k' \in [0, f(k)] \tag{2}$$
